Jamie Scott Craik

Software development · Developer tools · AI-assisted delivery

Email · Portfolio · GitHub · LinkedIn

Professional profile

I am moving into professional software development through independent projects in developer tooling, Python, TypeScript, SwiftUI and the web. I set product direction, inspect source and behavior, test results, and explain evidence limits. I bring 22 years of British Army experience, including 7.5 years at Warrant Officer rank, in leadership, instruction and operational delivery.

Selected software projects

SkillsBar | SwiftUI prototype and web demo

Defined an evidence-bound release model for evaluating AI Skill packages. Directed the product and interaction work and tested a public-safe demo; mock data illustrates the decision flow, not production or registry integration.

View case study

Skills SDK | Open-source Python project

Defined the scope and acceptance standards for portable package identity, validation, manifests and receipts. Directed CLI, schema and test work using Codex, and verified both passing and invalid-revision blocked outcomes at an inspected revision. The SDK does not install or publish packages.

View case study

Research CLI series | TypeScript tools

Directed safety, operator experience, tests and documentation for wSearch and rSearch. Published evidence covers offline wSearch checks, a bounded Wikidata retrieval, and fixture-backed rSearch dry runs; live service reliability and installed releases remain unverified.

Experience

Independent software projects | November 2024 to present

Build portfolio products and developer tools as independent work, not employment. Use AI-assisted implementation transparently while retaining responsibility for direction, source review, testing and published claims.

British Army | 22 years

Served across leadership, instruction, standards, logistics, management and operational delivery, including 7.5 years at Warrant Officer rank.

Technical focus

TypeScript, Python, Astro, SwiftUI, HTML, CSS, command-line interfaces, JSON schemas and automated tests. Strengths include technical communication, accessible explanation, and source-backed delivery.

Qualifications

ILM Level 7 Award in Leadership and Management · CMI Level 6 Diploma in Management and Leadership · Level 4 Award in Education and Training
